

Eid Abokor

Platform Engineer

📍 Manchester,UK  [linkedin.com/in/eid-abokor-6733911a1](https://www.linkedin.com/in/eid-abokor-6733911a1)  github.com/EidAbokor1  www.eiddev.xyz

Profile

Platform Engineer with experience building cloud platforms, automation tooling, and production infrastructure using AWS, Terraform, Python, Kubernetes, and Docker. I enjoy solving engineering problems, building end-to-end projects, and creating reliable systems that improve developer experience. Passionate about infrastructure, software engineering, cloud security, and learning new technologies.

Professional Experience

Data Platform Engineer, Quotient Therapeutics

07/2026 – Present

Cambridge,UK

- Build and operate AWS-based cloud and data platform infrastructure supporting scientific, genomics and AI/ML workloads, using Terraform, AWS CDK, Kubernetes/EKS, ECS, Docker and Python.
- Design and develop internal platform tooling and automation to improve infrastructure reliability, developer workflows and operational efficiency across engineering and research teams.
- Built a production S3 data attribution and cost-allocation platform for petabyte-scale research datasets, using Python, S3 Batch Operations, Lambda, Athena and S3 Inventory to classify and tag millions of objects while supporting dry-runs, backups and rollback.
- Engineer infrastructure supporting ML/AI workloads, including Amazon SageMaker, Bedrock and MLflow, collaborating with data and AI teams on platform requirements and architecture.
- Own platform improvements end-to-end, from identifying problems and defining requirements through architecture, implementation, deployment and production support.
- Improve platform reliability and observability through monitoring, incident investigation and infrastructure changes, working across CloudWatch, Prometheus and Grafana.
- Develop and maintain CI/CD and infrastructure-as-code workflows, applying secure IAM, networking and deployment practices across AWS environments.
- Drive cloud efficiency initiatives, including workload migrations and storage-cost optimisation, such as migrating internal services from EKS to ECS and developing project-level storage visibility for large-scale S3 environments.

Systems Engineer, Amazon Web Services (AWS)

11/2025 – 06/2026

Reading, UK

- Supported production AWS infrastructure and Kubernetes platforms across cloud environments.
- Owned end-to-end platform initiatives to improve observability, automation, and developer workflows.
- Delivered a Kubernetes observability platform using dashboards, monitoring, and operational metrics to improve production visibility.
- Built an internal feedback platform for engineering teams and external users, improving feedback collection and reducing manual processes.
- Developed Python and Bash automation scripts to streamline operational tasks.
- Worked with EC2, IAM, VPC, Route53, CloudWatch, S3 and EKS.
- Worked with Git workflows, CI/CD pipelines and infrastructure automation.
- Collaborated with engineers to improve platform reliability and developer experience.

IT Support Engineer (Infrastructure & Operations), University of Salford

02/2023 – 10/2025

Manchester, UK

- Supported both end-user services and infrastructure projects, working closely with cloud and platform teams.
- Delivered infrastructure for a university application platform using Terraform and Azure cloud services.
- Built and maintained Azure DevOps CI/CD pipelines to automate application deployments.
- Supported Azure services, networking, identity management, and cloud platform operations.
- Assisted with Infrastructure as Code practices using Terraform and Bicep.
- Performed troubleshooting across infrastructure, networking, and application services.

Key Projects

- Production-Grade EKS Platform with GitOps & Observability** , <https://github.com/EidAbokor1/EKS-Status-Hub>
- Designed, built, and operated a production-style Kubernetes platform on AWS using Terraform, EKS, IAM, IRSA, and VPC across three Availability Zones.
 - Built GitOps deployment workflows using ArgoCD, Helm, GitHub Actions, and OIDC authentication.
 - Implemented platform observability using Prometheus and Grafana, creating dashboards and alerting for Kubernetes workloads.
 - Built internal tooling providing engineers with real-time Kubernetes cluster visibility through the Kubernetes API.
 - Automated certificate lifecycle management using cert-manager, ExternalDNS, Route53, and TLS.
 - Integrated security scanning into CI/CD using Checkov, Trivy and Grype.
 - Applied Kubernetes RBAC and least-privilege security controls.
- Production-Grade ECS Platform with Infrastructure Automation** , <https://github.com/EidAbokor1/ECS-FIDER-APP>
- Built a production-ready cloud platform using ECS Fargate, Terraform, GitHub Actions, Route53, ACM, RDS, Secrets Manager and ALB.
 - Implemented Infrastructure as Code and automated deployments through GitHub Actions using OIDC.
 - Designed secure networking across multiple Availability Zones with private subnets and least-privilege IAM.
 - Automated DNS and certificate lifecycle management.
 - Built reusable Terraform modules to provision cloud infrastructure consistently.

Technical Skills

Cloud & Platform

AWS, Azure, Kubernetes, Docker, Helm

Programming & Automation

Python, Bash

CI/CD

GitHub Actions, Azure DevOps, ArgoCD, Git

Security & Compliance

IAM, OIDC, Vault, Secrets Manager, Checkov, Trivy

Developer Productivity

ChatGPT, Claude

Infrastructure as Code

Terraform, CloudFormation, CDK, Ansible

Monitoring

CloudWatch, Prometheus, Grafana

Networking

TCP/IP, DNS, Load Balancing, VPC, Firewalls

Operating Systems

Linux, Windows Server

Education & Certifications

BSc (Hons) Computer Networks, *University of Salford*

- Upper Second-Class Honours (2:1)

2018 – 2022
Manchester, UK

Certifications

AWS Certified Cloud Practitioner

Amazon Web Services

AZ-900: Microsoft Azure Fundamentals

Microsoft Certified

CoderCo DevOps Career Accelerator

In Progress (Focus: Kubernetes, Terraform, AWS, CI/CD, GitOps, Platform Engineering)
